

INSULATION SYSTEMS

COMMERCIAL BUILDING & RETROFIT CAN RETROFIT YOUR FACILITY WITH ENERGY SAVING FIBERGLASS INSULATION USING EITHER OF TWO COST-EFFECTIVE SYSTEMS:

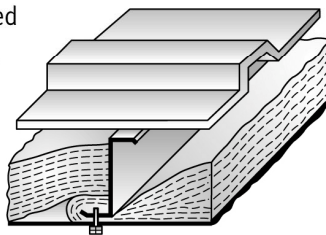

ROD SUSPENSION INSULATION

A patented system for retrofitting most roofs and walls with fiberglass insulation

blankets suspended by galvanized steel rods. This system can be installed either above or below the building frame depending on requirements.

STRAP INSULATION

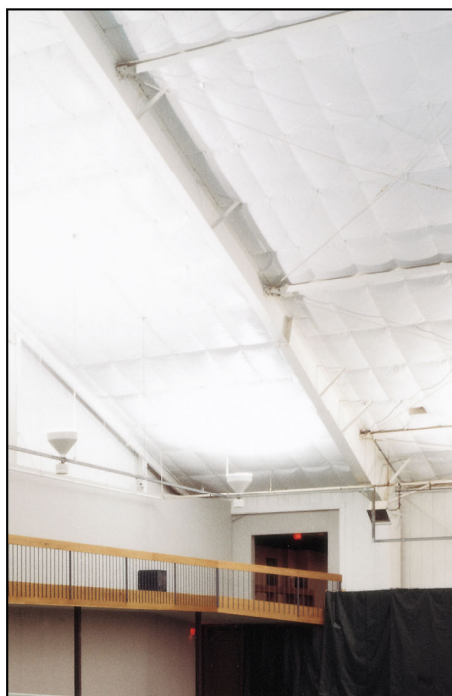

When building ceilings and walls are cluttered with ductwork, electrical conduit and other impediments, strap insulation is the preferred system. Fiberglass blankets are secured directly to the roof purlins by straps at specified distances.

BENEFITS:

- ▲ Aesthetically Pleasing
- ▲ Reduces utility bills up to 75%
- ▲ Controls condensation and ice buildup
- ▲ Increases light reflectivity

- ▲ Reduces noise transmission
- ▲ Installs without business interruption
- ▲ Three (3) year material warranty

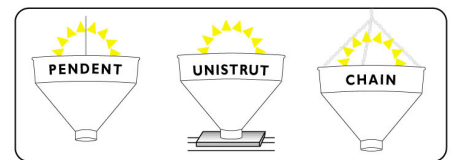

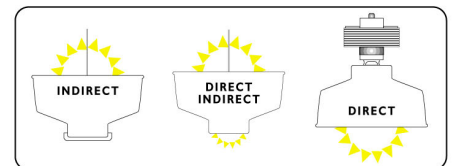

BEST LIGHTS™

Commercial Building & Retrofit, through its affiliate BEST LIGHTS, INC., offers energy efficient lighting systems for a myriad of applications. Unique BEST LIGHTS™ fixtures are designed to reflect all the lumens produced by the lamp for maximum lighting efficiency. You can actually increase light levels in your facility while decreasing the number of light fixtures.

BEST LIGHTS fixtures are available with 350, 400 and 1000 Watt lamps so there is one that's ideal for your application.

BENEFITS:

- ▲ Superior performance—up to 35% more light
- ▲ Evenly reflected light eliminates hot spots
- ▲ Easily installed; unistrut, pendent or chain mounted
- ▲ No external wiring for pleasing appearance
- ▲ Strong, lightweight aluminum housing with durable powder coat.
